Certification of Passivation

This is to certify that SSP's passivation process for stainless steel products meets the requirements specified in ASTM A380, Cleaning with Other Chemical Solutions, for the removal of soluble salts, corrosion products, and free iron and other metallic contamination resulting from the handling, fabrication, or exposure to contaminated atmospheres. Parts have been tested and shown to meet the passivation requirements as specified in ASTM A967.

T Holder

A handwritten signature in black ink that reads 'T Holder'.
